Customer Reviews

Evan Deveraux has assembled one of the most practical manuals introducing the art of home photography. His manner of addressing the reader is that of a friendly coach. For an idea of how he addresses his topics, the following statement comes from his Epilog: `There are very few people who are blessed with natural gift for certain skills. And even those who are would always insist that their genius has only 1% of effectiveness when it comes to their work. They attain the position and name because they "work hard to get it". They continue to practice again and again until they master whatever it is they are practicing. Just as Einstein did, just as Michelangelo did and just as all other geniuses and experts out there do. And this is exactly what you have to remind yourself time and again. You have to continue practicing and experimenting with various lighting techniques and tools in order to be able to become a good photographer. I would suggest that you not only experiment with what you do, but also read up about the works of others. Look at their photos; check out their strategies and what methods they used to achieve what results. This will give you an idea about what things you can try and what your strengths are.' Given that stance, Evan takes the reader through every aspect of successful home photography with an emphasis on lighting, of course, because you have no sunlight form being outside!
